

INSTALL / DISPLAY INSTRUCTIONS

1. Pound the 7" spike into the ground using a hammer or mallet (face the pointed end into ground).
2. Insert the 36" stems into the spike (if greater height is desired, acquire a 3 ft. to 10 ft. by 1/4" diameter copper pipe).
3. Slide the ring up or down to achieve the look and sound desired (up for less or no chime, down for more chime).
4. Bend the copper leaves away from the stems (so the chimes function properly). The ends are sharp, be sure to use caution when handling the leaves.
5. To keep the copper chimes looking new, spray a clear enamel finish (available at local hardware stores), or let them patina naturally outdoors. The chimes can be left outside year round, regardless of the weather.

*Note: if installing in a pot - 1. use a scrap piece of 2x4, 2. drill 1/4 hole into the wood, 3. pound spike into hole, 4. bury into the soil, this will act as an anchor, 5. pack the soil tight inside pot.

Ways to display your one of a kind handcrafted copper chimes: install in flower pots, koi pond, logs/driftwood, flower beds, desertscape, water elements, etc. If yard space is limited, these would look beautiful on a balcony, deck or patio. Simply place them in planter boxes or next to your plants. Also, can be displayed indoors as a metal sculpture. Unique and proudly made in USA 🇺🇸
